UPDATE ON POWER GENERATING UNIT STATUS

The Guam Power Authority reports that Piti Unit No. 8 returned to service earlier today, sufficiently increasing the island's power generation capacity.

"Barring any unexpected situations, GPA's generators and battery storage systems will be able to meet peak demand," stated John Benavente, P.E., GPA General Manager. "We were able to avoid implementing rotating outages during yesterday's peak by reducing the total demand through the assistance from the Airport, Port, and GRMC. I appreciate their efforts," added Benavente.

GPA encourages all customers to conserve energy, especially between the hours of 6:00 p.m. and 9:00 p.m. by delaying the use of non-essential air conditioning units. Energy conservation saves the customer money and reduces the overall power need during the peak demand.
